

RADIOLOGY EXAMINATION REPORT

Patient Name : Amr Nabil Mohamed Fathy Omran
 MRN : 10104632 Age/Sex : 38Y/M
 Requested By : Dr. Ihab Mohamed Ramadan Procedure Date : 20-06-2026 10:56:02
 Facility : MEDCARE HOSPITAL

ULTRASOUND THYROID

CLINICAL INDICATION: Follow up for thyroid nodule.

FINDINGS:

- Follow up ultrasound. A previous ultrasound dated June 22nd, 2025 was compared with.
- Both lobes of the thyroid are normal in size, outline echotexture and vascularity.
- A 7.2 x 8.5 x 9.8 mm (previously measured 7.2 x 8.4 x 9.8 mm mm) centrally isoechoic and peripherally hypoechoic solid wider than tall partially exophytic nodule without any microcalcifications is seen in the posterior aspect of the mid pole of the right lobe of the thyroid - TIRADS 4.
- No other obvious evidence of discrete focal lesion.
- Few small volume (short axis less than 5 mm) bilateral level II/level III lymph nodes are seen, some of which appear hypoechoic, however do not show any obvious increase in vascularity or perifocal increase in echogenicity, likely reactive. These measure up to 3 x 11.7 x 19 mm in left level 2.
- Great vessels of neck appear normal.

IMPRESSION:

- No evidence of diffuse thyroid disease.
- 7.2 x 8.5 x 9.8 mm (previously measured 7.2 x 8.4 x 9.8 mm mm) centrally isoechoic and peripherally hypoechoic solid wider than tall partially exophytic nodule without any microcalcifications seen in the posterior aspect of the mid pole of the right lobe of the thyroid - TIRADS 4. No significant interval change as compared to the previous ultrasound dated June 22nd, 2025.
- Bilateral reactive inguinal lymph nodes.
