

Patient ID	10519532	Patient Name	Howida Mhd Kasem Haddad
Age / Gender	50Y 11M / Female	Referring Physician	Dr Brian Mtemererwa
DOB	1975-07-18	Procedure	ULTRASOUND THYROID
Study Time	2026-06-20 13:41:28	Reported DateTime	2026-06-20 17:47:00

ULTRASOUND OF THYROID

Both lobes of the thyroid glands are normal in size with a homogenous echotexture and Doppler blood flow.

Right lobe of thyroid measures 4.64 x 1.48 x 1.38 cm with volume of approximately 4.98 mL.

Poor defined Hypoechoic heterogenous nodule seen in the right lobe of thyroid, measuring about 0.73 x 0.53 cm, no vascularity noted. TR4

Left lobe of thyroid measures 4.12 x 1.88 x 1.38 cm with volume of approximately 5.61 mL.

Cystic nodule with hypoechoic content seen in the left lobe of thyroid, measuring about 1.17 x 1.01 cm. TR4

Hypoechoic heterogenous nodule with multiple small calcification noted in the left lobe, measuring about 1.04 x 0.84 cm. TR4/5

Hypoechoic nodules noted in the left lobe of thyroid, measuring about 0.53 x 0.21 cm and 0.44 x 0.32 cm - likely colloid nodules.

The isthmus measures approximately 0.27 cm.

No evidence of retrosternal extension or infiltration of adjacent structures.

Bilateral submandibular and parotid glands are normal in size and echotexture.

There are bilateral well-defined, oval-shaped upper cervical lymph nodes with preserved fatty hilum and central vascularity measuring about 1.08 x 0.42 cm on the right and 1.17 x 0.52 cm on the left.

OPINION:

- Bilateral lobe thyroid gland nodules as described above.
- Bilateral upper cervical lymph nodes.

Note: No previous reports seen for this patient.

For clinical and laboratory correlation.
